How to keep my previous settings when upgrading or reinstalling CMS software?

About the CMS Uninstall / Upgrading / Reinstall the installation will not delete the database of the CMS, only if you delete the directory manually.

Because the database contain all the settings of the CMS software, so the previous setting will always keep on the database once the CMS had been installed.

For exporting or importing CMS settings, go to CMS's **Misc** setup page:

To export current settings, click **Backup CMS Settings** to save the backup file (.bak) to the desired directory.

To import settings, click **Restore CMS Settings** to import backup file (.bak) to the current CMS. The system will automatically restart.
